SAP LeanIX Application Portfolio Assessment

**Assess & optimize your application landscape, reducing IT costs & accelerating transformation.**

Customer Goals

- Establish a complete and accurate view of the application landscape.
- Eliminate redundant, obsolete, or shadow IT applications.
- Reduce IT spend and increase portfolio efficiency and agility.
- Enable strategic IT-to-business alignment.
- Support S/4HANA tranformations and cloud readiness.

Features:

- DXC helps build a centralized application inventory with application lifecycle data & business/technical relevance.
- DXC assesses applications using standardized criteria aligned to customer's strategic goals (business support, cost, risk, technical debt).
- Identify legacy systems, overlaps, compliance/security gaps – critical for decommissioning plans & transformation readiness.
- DXC integrates LeaIX with your CMDB, SAP systems, and discovery tools for enriched, real-time insights.
- DXC accelerators for decision-making & roadmaps.

LeanIX Application Landscape

SAP Certified Professionals Worldwide

DXC is continuing to develop SAP LeanIX capability across all regions,

SAP LeanIX Team

Collaborates with customers to streamline application portfolios, reduce IT costs, and accelerate transformation through data-driven insights, workshops, and strategic alignment.

Solution Overview

DXC helps enterprises streamline their IT landscapes by delivering LeanIX powered Application Portfolio Assessment. Many customers face challenges such as application sprawl, high IT costs, and limited visibility into their portfolios. DXC leverages SAP LeanIX to drive clarity, reduce redundancy, and prepare organizations for transformation initiatives like S/4HANA migrations and cloud adoption.

Customer Benefits

IT Cost optimization
- Use LeanIX to identify and elimiate redundant, obsolete or underutilized applications.
- Prioritize high-impact cost reduction opportunities with data-backed recommendations.
- Enable smarted investment in future-ready, value-driving applications.

Transformation Readiness
- Accelerate digital transformation by removing blockers and technical debt.
- Align IT architecture with business goals to support agile initiatives.
- LeanIX helps create a clear roadmap for modernization, consolidation or re-platfrming.

Improved IT Governance & Decision Making
- Establish a centralized, trusted repository of application data.
- LeanIX empowers stakeholders with real-time dashboards and heatmaps.
- Make informed, strategic decisions based on application business value and technical health.
