- Speed up change to meet regulatory requirements

Collaboration Hub

- Stay informed about content changes
- Provide easier-to-understand updates to your stakeholders
- Gain a 360-degree view of your processes and link to documents, Enable Now, analysis and metrics

Client Stories

Global Professional Services:

- Working with the client, and Enterprise Value Optimization engagement identified priority outcome and pain points. Configured Process Intelligence and ran analysis and simulations to identify quantifiable process improvements.
- Increased Sales Forecast Accuracy, Sales Force efficiency and lowered average Cost of Sale

Australian Utilities Company:

- DXC guided the client to write concise, end-to-end processes for process mining, implemented SAP Signavio Transformation Suite and started the company's journey on Process Intelligence using P2P as their first process for improvement.
- Quantified pain points, identifying mistrust of master data, manual approval processes and showing that people worked for the system.

Property Management POV:

- With a close working relationship with the APJ SAP Signavio Team, provided a POV for P2P pain points using a sub-set of data.
- Demonstrating that a high% of POs go through some form of change, multiple variants to execute one end-to-end process, long cycle-time of end-to-end process and high number of variants of executing the clear invoice process.

DXC's SAP Signavio team advise, implement and support organizations to address current business priorities and challenges, focusing on:

- Ensuring clients have a full understanding of the Transformation Suite
- Engaging with client SMEs to ensure accurate, concise processes are available and ready for Process Intelligence
- Assist with connectivity to systems ensuring accurate reporting and enabling fact-based decision making
- Modernizing operations, driving overall business process improvements and a reduction in total cost of ownership
